The disclosure is objected to because of the following informalities: the various headings need to be inserted in the body of the specification (Brief Description of the Drawings, etc.).

Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Coakley. Coakley shows a valve piston where pump forces are opposed by spring 40 and pressure from a load sensing line 47. Orifices 42 provide some communication between pump pressure inlet 42 and reservoir outlet 46.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coakley. It would have been obvious to set any spring biased valve to flow at any given flow rate under any desired pressure.

Claims 5 and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coakley in view of Machlanski. Machlanski shows a similar piston with wedge shaped slots on the outside of the piston, which slots are seen as equivalent to Coakley's slots 42. It would have been obvious to replace the Coakley square cut slots with the wedge shaped slots taught by

Machlanski to smooth flow and because the wedge shaped slots would have been easier to form (such as by using a triangle file or similar broach).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tougasaki et al., Ballard et al. (valve 12), Dunn (valve 16), and Faust show similar relief valves where pump pressure is opposed by a spring and a load sensing pressure to control a path between a pump and sump.
